

Got Web Host Announces VPS Hosting

Got Web Host is proud to announce the addition of Virtual Private Server (VPS) hosting packages to their extensive array of available SEO friendly hosting plans.

Wheatfield, IN (PRWEB) March 22, 2006 -- [Got Web Host](#) is proud to announce the addition of Virtual Private Server (VPS) hosting packages to their extensive array of available SEO friendly hosting plans.

Director of Marketing & Support, Tanya Martin, said of the new service, "We are quite excited to be able to provide this option. It has been a goal of ours for quite some time, and we are confident that it is going to be eagerly accepted by both current and future clients of Got Web Host."

Lloyd Brown, Director of Business Development, explained VPS hosting as "a method of having the security of a dedicated server at the cost of a virtual hosting package."

Utilizing Vituozzo software we are able to let each individual subscriber choose their own operating system or control panel in addition to having resources such as increased memory bursts available, without having to worry about what others sharing the server might be doing," said Brown.

Martin added, "our VPS customers have the ability to increase the amount of disk space and bandwidth usage they may want on the fly. We now offer packages with up to 10 individual Class C subnets. With VPS, people that are not quite ready for the expense of a dedicated server will be able to operate with the security of knowing that nothing they do is going to effect anyone else on the server, and mistakes made by others will not effect them."

Got Web Host provides [SEO web hosting plans](#) for companies concerned with Google's host crowding penalties associated with search engine optimization.
